## **MetroList and Lundy Launch “nora,” Ushering in a New Era of Personal AI Assistants**

***—Real estate professionals now have a single AI assistant that works across the tools they already use—***

**Sacramento, Calif. — June 9, 2026 —** [MetroList](#), Northern California’s largest multiple listing service (MLS), announces a collaboration with [Lundy, Inc.](#) to introduce “nora,” the AI assistant built for real estate professionals working across multiple platforms.

Designed specifically for real estate professionals, **nora** acts as a personal AI assistant that works across the systems agents already use. Through natural language, agents can manage email and calendars, summarize communications and documents, answer MLS rules and compliance questions, search property and market information, assist with transaction management and forms, coordinate work across connected business systems, and complete tasks on their behalf. **nora** can also remember preferences, learn workflows over time, and continue working in the background while agents focus on their clients.

“MetroList has embraced several products from Lundy because we are committed to delivering practical innovation that helps our subscribers succeed,” said Dave Howe, President and CEO of MetroList. “**nora** represents the next step forward providing agents with a powerful new way to save time, reduce administrative work and stay focused on the needs of their clients.”

This launch reflects MetroList’s continued investment in tools that modernize the agent-experience. By combining MLS-connected intelligence with workflow automation and expanding integrations, **nora** is positioned to become a valuable new assistant for real estate professionals across Northern California.

“**nora** was built to give real estate professionals a true AI assistant that can help with the work they do every day,” said Justin Lundy, CEO of Lundy, Inc. “This is another collaboration with MetroList to provide an AI assistant that understands which tasks agents need to succeed.”

### **Flexible, Wallet-Based Access**

**nora** operates on a wallet-based system powered by Stripe. MetroList-specific features are provided at no charge to MetroList subscribers, while other services such as email

reading, calendar management and other advanced task execution functions are micro-transactions to get tasks done. To help users evaluate the platform and understand how **nora** fits into their workflow, MetroList provides an initial balance so subscribers can explore the platform and experience its value firsthand, then decide to invest their own funds.

As the platform evolves, future integrations and capabilities will expand **nora's** usefulness even further for MetroList subscribers.
